WHSR: Amazon, AU raise concerns over IBM's next-gen research centres In recent years, a consortium of Australian and US research institutions, including the universities of Adelaide, Melbourne and Sydney, have banded together to set up a "supercluster", to be sited in Sydney. This will be a major advance, with the potential to harness the massive computational power of the US to the benefit of Australia and the region. July 18 marks the 74th anniversary of the liberation of Auschwitz. There are many things to commemorate this tragic event, but a recent conversation with none other than former US president Barack Obama has gotten a lot of people to begin considering what can be done about the unresolved Holocaust in the Palestinian Territories. Every day that passes in the occupied West Bank and Gaza Strip is marked by continued and ongoing violations of international law. In the past year alone, more than 2300 Palestinians, including 1300 children, have been killed. But now, the situation for many on the ground in the Palestinian Territories is looking up – as Israel’s settlement expansion is halted for the first time in years, according to the Netanyahu government’s announcement on Tuesday. Why is this important? Let’s start with the simple fact that Palestinian children continue to experience extreme levels of violence and trauma as a result of Israel’s 60-year military occupation. According to Physicians for Human Rights-Israel, this violence is part of a “structural pattern of ongoing Israeli violence against Palestinians in the West Bank and Gaza Strip.” Yet Israel’s deep structural imbalance makes the lives of children incredibly difficult for a variety of reasons. Here’s why: Most Palestinians live under Israel’s military occupation. The military occupation was imposed by Israel following the 1967 war, and the UN Security Council considered Israel’s annexation of the West Bank to be a violation of international law. This means that Israel is still in control of the Palestinian territory – something that prevents Palestinians from freely living, traveling and working in their own land. The occupation also means that Israel controls where Palestinian children can or cannot study, work or play. From 2000 to 2017, 30000 homes have been demolished in the occupied West Bank, often without compensation and in clear violation of international law. Destruction of homes is a frequent tactic used by the Israeli military to force people from their homes and/or to prevent Palestinians from building extensions that do not conform to Israel’s standards. This means that Palestinians who are forced from their homes are often unable to live in homes similar to those of their ancestors. In the course of this occupation, Israel has also seized more than 50% of the West Bank’s water resources, depriving Palestinians of their most important, and under international law, legal resource. Even Israel’s military budget is way higher than that of any other country

Q: How can I make sure that a newline in a text file does not overwrite the characters? I'm using JTextArea to update a list of files in a text area. When a new list of files appears, it displays newline characters and new lines. How can I make sure that they don't overwrite the existing characters in the text area? My text area: private JTextArea listBox; Then I write a new line with: listBox.append(" "); And I read a new line with: String r = listBox.getText(); listBox.setText(r); listBox.removeAll(); Note: I don't want to set a single line in the text box. I want the text box to update to include only a single line at a time, or not at all. A: For what you have shown, you need: listBox.append(" "); As you have shown it, this will simply append a new line. So, in the case that the listBox is already filled, you will not add a new line, but just overwrite some existing content. As @Lee_Copeland points out, you should be using " " instead of " " (no quotes). If you are using " ", you may want to get rid of the " " and use " " instead. If you want the line separator to be by newline, you should use " ". If you use " ", the line separator is by newline. If you want the line separator to be by newline, you should use " ", but if you want the line separator to be by newline, then you should use "".

Q: Find k so that $\int_0^1 x^k \log\left(\frac{1-x}{1+x}\right) dx$ is convergent. My work so far: For the sake of it, let's evaluate the integral only for $x \in (0,1)$. $\int_0^1 x^k \log\left(\frac{1-x}{1+x}\right) dx = \int_0^1 x^k \log\left(\frac{1-x}{1+x}\right) dx$
